)-({})In topology and related areas of mathematics, a metrizable space is a topological space that is homeomorphic to a metric space. That is, a topological space is said to be metrizable if there is a metric. such that the topology induced by d is. History - A topology on a set - Continuous functions - Products of spaces. The indiscrete topology on X is the topology $\{\emptyset, X\}$; that is, it's the topology in which only \emptyset and X are open. It is the smallest possible topology on X . (Note: discreet means able to keep a secret, and indiscreet means gossipy. The topologies are discrete and indiscreteâ€”there is no gossipy topology.).{/REPLACEMENT}
