

Excerpt from Standard Cloths Structure and Manufacture: General, Military, and Naval Commercial and technical standards have obtained recognition in several branches of the textile industries. Systems of yarn counting or measuring, and of fabric construction of a prescribed weight per yard or metre, are standardized factors in worsted, woollen, cotton, and other woven and knitted productions. Specialized standards have also been established relative to fabric breaking-strain, elasticity, colour, and finish for Government and official contracts. Standardized practice facilitates commercial dealing and is favourable to manufacturing proficiency. Textural fineness and quality are, apparently, subtle and anomalous technicalities to standardize, but the problem does not offer insuperable difficulties. The two controlling elements involved are the nature of the fibrous materials utilized, and the organized individual and collective groups of processes and operations of manufacture. With a view of elucidating the technical scope and diversity of the subject, collections of trade, general and original specimens have been consulted, and the data ascertained and collated verified by experimental research. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
