

Unlike some other reproductions of classic texts (1) We have not used OCR (Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

The physical chemistry of the proteins must in the last analysis depend upon their structure. The composition of proteins is revealed by analytical chemistry, and the behavior of proteins by physical chemistry.

Two proteins of the globulin type, serum globulin and tuberin, and the protein of milk, casein, have been purified (a) of the other proteins and (b) of the inorganic.

THE PHYSICAL CHEMISTRY OF PROTEINS. amino acid residues in the polypeptide chain must be located in crystallographically equivalent positions.
